1.2 What is it?

This is a Graphic User Interface for the Midifile Player GMPlay.

1.3 What does it do?

Supported options:

- Volume - Programmpriority - Mixingfrequency - Playbuffers - Polyphony
- Forcing XG-Mode - Forcing Mono-Mode - Tonefilter - Drumfilter - Midifile-Info
- GMPlay Output

For each Option exist a enable/disable button. If one option is disabled, it isn't used in the commandline, which is used to start the GMPlay. The default is used. Is it enabled, the option is allways used.

Example: If the Mono button is enabled, and the Mono button is pressed, the option "-mono" is set in the commando. If the Mono button isn't pressed, the option "-stereo" is used.

For more information about the options use the documentation, which is included in the GMPlay programmarchive!

Importand: The GMOut-Button must be pressed for informationoutput!

1.4 What is needed?

Requirements:

- Amiga - AOS2.0 or higher - Correct installed GMPlay (GMP-G is tested with version 1.3 and 1.3a) - Midifiles (to listen)

1.5 Installation!

Installation:

Nothing special. Copy the complete directory to the place wherever you want to have it.

1.6 Menu!

Menu:

Project/About Programmers info

Project/Load Midi Open a file requester for loading a Midifile

Project/Quit Quit the GMP-G. If a Midifile is playing, it stops! (Same function as the close button of the window)

Project/Quit&Play Quit the GMP-G. If a Midifile is in use, the playing continues!

Config/Load GMPlay Load the GMPlay program.

Config/Save Save the configuration (Saved options: Buttons, the default directory and the window-position)

Configs/Load Load the last saved configuration

Control/Start Same function as the play button. It starts the playback.

Control/Stop Same function as the stop button. It stops the playback.

1.7 Special!

Specials:

You can close the GMP-G with the menu "Project/Quit&P". The song, which is currently in use, continues with playing. You can restart the GMP-G and stop the playing with the Stop button. This is only possible with songs which are started from the GMP-G!

1.8 Problems

Problems:

1. The 14bit.driver of the GMPlay V1.3a has problems with old Versions of NewIcons. Install the newest version! 2. When a file requester gets open while starting the GMP-G, the GMP-G.prefs file is missing in the GMP-G directory. You have to install them from the original GMP-G archive into your GMP-G archive!
