Welcome to the *Windows Resource Kit,* which is designed for people who are, or who want to become, expert users of Microsoft® Windows™ 3.1.

We prepared the *Windows Resource Kit* in response to your requests for a detailed, easy-to-read technical view of Windows, so that you can better manage how Windows is used at your site. The *Windows Resource Kit* also contains specific information for system administrators who are responsible for installing and managing Windows in a network or multiuser environment.

A Map to the Files:

The Windows Resource Kit is approximately 550 pages of technical information. This beta release is broken into the 32 files listed below. Since printing out this volume of information will be time consuming, we suggest you print only those sections of interest. Also, print the file for the TROUBLESHOOTING CHARTS (*02welw.doc*). This file will provide you with troubleshooting flowcharts that will cross reference into the documentation. You can use these charts as a roadmap to the rest of the kit.
