

Shareware Utilities by David Warren for Microsoft Windows 3.1

Outside! (the Original)

Troubled by DOS applications that just don't work right inside Windows? Run them Outside! Written specifically for high resolution graphics games and sound board applications that require more system resources than Windows is willing to surrender, Outside! lets you launch a DOS application from Windows, run it "outside" windows with the full resources of your computer, and automatically return to Windows when done. **The safe way to launch CHKDSK/f from Windows!** Multiple configuration options. Shareware, \$10 registration.

Tasker

A Windows application scheduler with a difference. Schedule applications to launch at specific times on a daily or weekly basis. Maintains multiple schedule files, log file of starting applications. Can launch DOS applications in a window, or works with Outside! for pesky utilities or faster backups. Shareware, \$10 registration.

Stuffer

Launch a Windows application and have it perform a series of keystrokes automatically. Launch Terminal and have it dial! Maximize any window on startup! Take control of your desktop! Why waste system resources with cumbersome Recorder macros when less might do more? Shareware, \$10 registration.

QuickCommand

You just need to copy one file to a floppy, but File Manager and even a DOS box take so long to load, it hardly seems worth it. Just keep this little box in an out-of-the-way place on your desktop, and a dozen useful housekeeping commands are only as far away as your keyboard: Copy, Move, Delete, make and remove directories, and more. Even Reboot and Restart (Windows). Shareware, \$10 registration

for Windows for Workgroups:

NetSync

At last! Synchronize all the system clocks in your Windows for Workgroups network. Even supports DOS computers using Workgroup Connection. Simple, almost invisible once installed. Shareware, \$25 site license.

NetRunner (avail. 8/93)

The tape drive is on Bob's machine, but he's out to lunch and you don't want to walk down there just to start a backup of your computer. With NetRunner, you can launch a backup, or any other application, on any other machine in your workgroup.

Look for these useful programs beginning this month on CompuServe (GO WINSHARE) and on selected bulletin boards around the country. Order direct by sending check or money order (all applicable sales taxes and shipping included in prices listed above), and preferred diskette size to:
