How To Play

The object of poker solitaire is to try and build the best possible poker hands in both the rows and columns. cards are dealt from the hand one at a time. You select the position to place this card by moving the mouse to that position and clicking the left mouse button.

Once you have positioned the dealt card it can NOT be moved again.

The game is one of both luck and skill.

When 25 cards have been dealt from the hand the computer will score the game based on the rules of poker solitaire. The scoring of poker solitaire is different than regular poker because of the difficulty of creating certain card combinations.
