Class Name Examples

CLASS NAME	PROGRAM
AT	Application Timer (Yes, you can have it commit suicide)
Sfaxmng	Delrina WinFax Pro
Recorder	Microsoft's Windows Recorder
NFMWClass	Norton Desktop for Windows
PROGMAN	Microsoft's Program Manager

Command Line

Command Line Syntax

SLAYER [/C:<class_name>] [/T:"<window_title>"]

Example (using class name):
    To Kill WinFax PRO 3.0 by class name
    SLAYER /C:Sfaxmng
    This will terminate WinFax PRO using the internal class name

Example (using window title):
    To Kill WinFax PRO 3.0 by title
    SLAYER /T:"Delrina WinFax PRO"
    This will terminate WinFax PRO using the Window Title

NOTE: The class name is an internal name used by Windows.   Various tools will give you the class name of a running program.

Class Name Examples

Contents

Slayer is a program which can terminate other programs.   You specify which program by giving *Slayer* the internal class name or the window title.

For *Application Timer* Users Only:
> This program is a companion application to *Application Timer* and does NOT carry an additional registration fee if you register *Application Timer*.   You can use *Application Timer* in conjunction with *Slayer* to shut down other programs and even shut down *Application Timer* when it is done running its tasks.
