Importing

The data file **WINGDATE.DAT** is provided as a starting point.   It is saved as a "Comma Separated Value" file (.CSV) in the format of - "mm/dd","event".

You can create your own **WINGDATE.DAT** file from an existing software package if your Dates and Events can be exported in .CSV format.   Most spread sheets and data bases will export in .CSV format.   The date field can include the year ("mm/dd/yy"), but it will be stripped the first time the file is saved by **WingDate**.

ADD

Clicking the **"Add"** Button, pressing **"Alt-A"**, or pressing the **"Insert"** Key will present a simple dialog box for adding dates and events.

Clicking the **"Cancel"** Button, pressing **"Alt-C"**, or pressing the **"ESC"** key in the **Add** dialog will cancel the **Add** action.

UPDATE

Highlighting an event and clicking the **"Update"** Button, pressing **"Alt-U"**, or   **Double Clicking** the entry in the event list will present a simple dialog box for updating the date and/or event.

Clicking the **"Cancel"** Button, pressing **"ALT-C"**, or pressing the **"ESC"** key in the **Update** dialog will cancel the **Update** action.

DELETE

Highlighting an event and clicking the **"Delete"** Button. pressing **"Alt-D"**, or pressing the **"Delete"** Key **Deletes** the entry without presenting a dialog box or asking for confirmation.   The   way to recover from accidentally deleting an entry is to exit **WingDate** without saving, restore **WINGDATE.DAT** from a backup copy, or re-add the entry.

SAVE

If your event list is updated the **"Save"** button will activate allowing you to save your changes.   If you **"Close"** **WingDate** without saving, your changes will be lost.

The Save process will first make a backup copy of your **WINGDATE.DAT** file as **WINGDATE.BAK** before saving your new event list.

PRINT

The **WingDate** Event List can be printed by clicking the **"Print"** Button or pressing **Alt-P**.   The print feature is not sophisticated.   It was developed using a dot matrix printer and has no options for page setup or font selection.
