

AJ times

What is **AJ times**?

Your Macintosh's internal clock loses or gains, doesn't it? I suppose your answer is YES. My Macintosh does too. In fact my Macintosh gains two seconds a day indeed. It is annoying to correct the internal clock every day. **AJ times** solves this problem, which corrects the internal clock every start-up.

How to use **AJ times**

- 1) Drag **AJ times** into the System Folder. That's it. Then open **AJ times** and set the current time in "Start measuring" at the time signal of TV, radio, telephone service, etc. You can not adjust year, month nor day.
- 2) After several days, maybe at least two days, a week recommended though, set "Period of measuring" clock to the current time by the time signal. Again, you can't adjust year, month nor day. **AJ times** calculates the error automatically, and the gaining or losing error is showed in "Mod time" area.
- 3) Restart Macintosh. It makes Macintosh 's internal clock corrected. When re-measurement is needed, press "Clear" button. (No Undo function supported. Be careful to do so.)
- 4) When you find your Macintosh is still gaining or losing, you can simply set again "Period of measuring" clock. **AJ times** re-calculates the error. You don't have to start measurement procedure from 1) again.

NOTE

- As this doesn't patch to the trap routine, it's unlikely to cause a conflict with other Extensions. (I'd like to say it's never, but....)
- During measurement, do NOT try to correct the internal clock in General Control Panel, which causes wrong measurement result.
- [AJ times](#) is programmed on the assumption that Macintosh loses or gains regularly. It does not work properly if your Macintosh does irregularly.
- Error less than one second is rounded down and not corrected.
- It does nothing if Macintosh loses more than two seconds a hour. It is because of, perhaps, the internal battery is dying or your Macintosh is just out of order.

Distribution

[AJ times](#) is copyrighted. (c) Copyright 1991. All rights reserved.

[AJ times](#) is a freeware and you may freely distribute it through BBS or online services including CompuServe or AOL, which do not charge for specific download fee, provided that this package, [AJ times](#) and manuals, is totally intact. However, any commercial distribution of this package, such as sale on the floppy disks or CD-ROM or anything else, is prohibited.

Additional note:

The original manual is written in Japanese. I, Nobuhiko Yoshida, translated it into English.

Bug?

I would like to hear about any bug you may find. I would also appreciate if you could send me a postcard of your home town. Please send any bug reports or comments or a postcard to:
