

Scatter plot

There are many other plot types and options you can use. We finish this brief tutorial by giving another example. Let us say that we want to explore how the “Selling price” affects the “Revenue”. We can visualize this by using a scatter plot.

To make a scatter plot, we start by making sure that the current view is in “First selection” mode. If this is not the case, click on the “1st” button of these two. Then we select the “Selling price” node.

Switch to “Second selection” mode by clicking on the “2nd” icon on the toolbar, and click on the “Revenue” node.

Finally click on the “Scatter plot” icon on the toolbar.

A plot should appear.
