Icon title field menu

In the "Graphical view" nodes and folders have a title field. Usually this title field contains the name of the object. However, you may temporarily change this by selecting another parameter from the "icon title field" menu in the toolbar.

To edit the content of the title field, you must activate it. This is usually done by pressing the "option key" while clicking the object's icon. As soon as a title field is active, you can move around to other title fields using the arrow keys, (or Tab, Shift-Tab, Return and Shift-Return).

The content of an edited title field is entered into the model as soon as you deactivate the field. A field is deactivated when another field is activated. To deactivate a title field without activating another field, just press the Enter key (or alternatively the Escape key) or click with the mouse at some empty region anywhere in the window.

The "icon title field" menu is only present in the "Graphical view toolbar".
