Adding more node info

Sometimes you want to add some additional information to a node. Such information could e.g., be a brief description of the variable the node represents, some comments about the assessed values, etc.

To do so, select the node and use the "Get Info…" command in the "Model" menu. As a result, a dialog box appears where you can enter the text you want. When you are finished, you just click the "OK" button to close the dialog box.

Later you can bring up the same information again by selecting the node and use the "Get Info…" command once more.

The information entered in this dialog box can also be included when you export the model file to another format.
