

A DynRisk model is accessible and can be edited from the different views:

- Graphical view
- Node table view
- Simulation view
- Edge table view

You change the view type for the active window, by using the corresponding command at the bottom of the “Special” menu. The command corresponding to the current view type, is check marked.

There is also a specialized view for result files:

- Analyzer view

To further assist you in your navigation through a DynRisk model, there a few special dialog boxes:

- The “Find” dialog box
- The “Navigate” dialog box

As you may have noticed, the toolbar changes according to which view you work in. Similarly, some of the menu commands apply only to some particular views. If a menu command does not apply to the current view or is unavailable for some other reason, it is dimmed.
