

Selecting and moving

Just as in the “Graphical view” you select a node in a node table by clicking its icon. The node icons are located on the left-hand side of the node table.

Node data may alternatively be edited using the “Node editing” dialog box. This dialog box appears if you select a node and then choose the “Open node(s)...” command in the “Model” menu. Alternatively, and usually more efficiently, you can double-click the node's icon.

In the “Node table view” you cannot drag the nodes around. However, you can still move nodes to other folders. To move a node e.g., to the Trash, select the node, and click the “To trash” button in the toolbar.
