

The “Find node...” dialog box is used to search through a model file for nodes satisfying specific conditions. DynRisk allows you to use a lot of different types of conditions. Moreover, there are also a number of different “Search actions” to choose between.

The dialog box is split up into three different views:

- Identity
- Distribution
- Search

To select a particular view, you click on its corresponding icon in the icon bar at the left-hand side of the dialog box.
