

Thanks

Thanks must go to the following people who have helped me with advice, sample code, and general encouragement. Dr. Norbert Müller author of Ball and Stick for supplying me with a description of the Ball and Stick Moldat format and also for information about Ball and Stick resources. Cherwell Scientific Publications Ltd for the gratis copy of Ball and Stick. My Ph.D thesis is now full of wonderful models! Dr. John Pilling for pointing out some of the bugs and providing the maths for the non-orthogonal calculations and some of the unit cell files. John Walsh, Douglas Purdie and Chris Muryrn, the beta testers, without whom this would have been finished sooner but with more hidden bugs! All the people who have sent messages of support and comments on the program.

FLAME to DTS at Apple for not providing me with the creator type ('LaTM') that I asked for and refusing to tell me why I couldn't have this or who if anybody had it instead. For consistently ignoring fax's and letters requesting information about my alternative 'LaTM' creator allocation. THANKS FOR THE SUPPORT :-)
