

## ADCRV;Fetch 3.0.1

Welcome to the latest official release of Dartmouth's FTP client for Macintosh. This installer lets you choose between copying a native executable or a kind of "fat binary" which runs on any Macintosh. It also provides a bookmark file for use with the Macintosh's "Favorites" feature. In the Internet Config file, you can specify the location of the program. Thanks to Aladdin Systems for their support. E-mail: [fetch@dartmouth.edu](mailto:fetch@dartmouth.edu)

Note:  
Requires 400K-500K,  
disk space to create a temporary file.

For more information, see the "README" file in the source code directory.  
Help with Fetch is available at <http://www.fetch.com>.
