TableCloth 2.0 Lite

coauthored by Ben Eloy and Robert Paige; modifications by Brad Hutchings; additional modifications by Dan Meriwether at Digital Internet Systems
Consultants (DRM@Dis.org); still more modifications and beta testing by Paul Kerton.

TableCloth converts ASCII tab-delimted text (created by a spreadsheet application) to HTML table format.   To convert an ASCII text file, drop it onto the TableCloth icon.   See the Read-Me for more information. TableCloth is emailware; please send email to beloy@istore.com if you like this applet.
