

THE ELIMINATOR

In The Eliminator, you are given a set of numbers that you must eliminate by creating your own equations.

To do this, you click on three number "stones" to create an equation. For example, if you have chosen the addition subject, clicking on a number stone 5, then a number 7 stone, and then the number stone 12, would create the equation: $5 + 7 = 12$.

This is a correct equation. If the equation is correct, the three stones you chose to create the equation are eliminated. The game is complete if you can eliminate all the stones. If you get stuck choose the "New Game" button and try again.

As usual, the beginner mode covers numbers 1 to 12. The advanced level uses numbers 1 through 36. You may choose any subject.
