

Deluxe Klondike Shortcuts:

Press the space bar to turn up a new card, or group of cards, from the stock.

Double-click on cards to quickly move them to the foundation piles.

When you double-click on any card, Deluxe Klondike will search for a valid play for that card. If a valid play is found then the card is moved. Deluxe Klondike will make the first move it finds. This won't necessarily be the best move.

Dragging a card off its original position and letting go of the mouse button will have the same effect as double-clicking on it. Deluxe Klondike will search for a valid move for that card.

Hold down the SHIFT key to highlight all of the cards that can be played.

Press COMMAND-PERIOD to cancel an Undo All, Redo All, or Auto Play sequence.

Peeking:

After a game is over you can peek at the remaining cards in the tableau that are still face down. To peek, just click on any pile in the tableau and hold down the mouse button. All of the face down cards in the pile will be shown.
