The Outland Gateway

Run The Outland Gateway   to connect to Outland. Once on-line, you will use it to launch Outland services.

ere are some things to know:

• To run an Outland service, double-click its name from the Outland Services window.   You can run up to three Outland Services at one time.

• A puzzle piece next to a service indicates that you do not have the latest version. Double-click the service to patch the needed changes. (Suggestion: If you run another service first, you'll have something to do while patching.)

• From Edit menu, you can:
  • Edit your password.
  • Edit your Player Name (as opposed to your Account ID, which is permanent)
  • Edit your Player Description.
  • Get information about another member by entering their Account ID.

OK, that's it for the Gateway.
