

Other Windows

In addition to the main game window, there are several other windows that can be optionally displayed during the course of the game.

The Info Window

The Info Window can be displayed by clicking on the "Info" button in the main window or selecting "Show Info Window" from the Player menu.

This window displays information for each of the companies and each of the players as well.

The information displayed for each company is:

- Size of Company
- Stock Available and Sold (these will always add up to 25)
- Cost per Share of Stock
- Majority and Minority Holder Bonuses

The information displayed for players is:

- Purchases, sales and trades of stock made during the previous turn
- Total stock holdings (only if "Stock holdings visible to other players" is checked in Preferences)

High Score Window

The High Score window displays the highest scores obtained by both human and computer players. There are six high score lists: one for each possible number of players (2-6 players) and one for the ten best high scores of all time. This was done since scores will vary significantly depending upon the number of players playing the game.
