

Introduction

Roulette is a game that is found in casinos around the world. Although it looks complicated, it is very easily mastered. The player may wager on eleven different types of bets. The player may bet on the numbers in groups of one, two, three, four, five, six, twelve, or eighteen. All wagers work basically the same way, and every bet is decided on each spin of the wheel.

There are two different versions of the game, the American style and the European style. Each uses a different wheel and has different odds. In the American version the wheel has the numbers 1 through 36 and both a 0 and 00. The European wheel only has the single 0. The European version gives the player much better odds because of this fact.
