

Smaller Installer Toolkit

This package contains the Smaller Installer Builder application and supporting documentation. To create your own installer, you will need a copy of Compact Pro®. You may also need a resource editor such as ResEdit™ or Resorcerer®.

Getting Started

To get started using Smaller Installer, install the toolkit and read the SI User's Guide. If you are not familiar with Compact Pro, you should also review the Compact Pro User's Guide.

Installing the Toolkit

- If you are using any anti-virus utility other than Disinfectant™, please turn it off before proceeding. Anti-virus utilities such as Virex™ or SAM™ tend to interfere with installers.
- Use the Drive button to select the disk where you would like to have the toolkit installed.
- Click the Install button to begin the installation. The installer will place all files in a folder named "Smaller Installer 2.0.1" on the selected disk.

Restrictions On Distribution

This file (SI Toolkit Installer) may be distributed freely as long as it is not modified in any way. Distribution of any of the individual files within the package is not allowed.

Contact Information

If you have any problems installing this toolkit or if you require additional information on Smaller Installer, please call or write:
