

What is it?

Plays the sound in the active sound document.

How to use it

To play a loop, hold down the option key while selecting Play.

Notes

You can play 4 tracks of 16 bit stereo sound at 44kHz on a 68040, and at 22kHz on a 68030.

While playing sounds if the mouse doesn't move around smoothly or at all, try turning off the Mixer, Stereo, or Linear Interpolation. If that doesn't work, try muting some of the tracks or Resampling to a lower sample rate.

See "Sound Out" Preferences for more information.
