Installing AutoMenus Pro

1. Remove any old copies of AutoMenus from your Control Panels folder.
2. Place the appropriate AutoMenus Pro 3.2.X Control Panel in your Control Panels Folder located inside your system folder.
3. Reboot.

NOTE: AutoMenus Pro requires System 7.0 or later, it will not load on computers running an earlier version of the System Software.

Entering Your Secret Keycode

Once you have registered AutoMenus Pro, or if you are a previously registered user, you'll want to enter your keycode so you can stop the nasty startup reminders. To enter your keycode, perform the following:

1. Open the AutoMenus Pro Control Panel.
2. When the registration dialog appears, enter your secret keycode and your name in the fields provided.
3. Press the 'OK' button.
4. When the dialog is dismissed, close the AutoMenus Pro Control Panel. Then, after reopening the Control Panel, open the 'About' dialog. Your name should now appear at the top with your registration number.

NOTE: Be sure to enter your name exactly as it appears in the invoice you received from us. Your password is based on your name.
