

Deluxe Folder Icon Creator

Overview

Deluxe Folder Icon Creator (dFIC) gives the user a simple way of creating customized folder icons. dFIC does this by superimposing a file icon over the standard, plain folder icon to create a new folder icon that quickly and visually identifies the folder's contents.

dFIC allows the user to take complete control over the custom folder icon. The user may chose the appearance of the folder icon itself, as well as the size, placement, and position of the superimposed file icon.

To use dFIC, the user simply needs to drag a single file icon onto the Deluxe Folder Icon Creator application icon, and use the on-screen buttons to manipulate the custom folder icon to his or her liking.
