

# The Buttons

Under the Deluxe Folder Icon Creator title is a row of four buttons.

## Folder Icon button

This button toggles between the “Copland” (System 8) style folder icon, the standard folder icon, and the diskette icon.

## Size button

This button toggles between small and large superimposed file icons.

## Placement button

This button toggles between placing the superimposed file icon inside or outside the folder icon. If the icon is drawn inside, it will be clipped so not to draw outside the folder icon.

## Destination button

This toggles between copying the icon to the clipboard or pasting it on to the file’s parent folder.

The four arrow buttons (or the arrow keys) may be used to position the superimposed file icon. At the center of the arrow buttons is a preview window which reflects all changes.

When the custom folder icon is configured to your liking, click on the “OK” button or press Return to save the icon.
