

Introduction

What is Pageboy?

Pageboy helps you create documents that anybody can read. These documents may contain Pictures, Text and Sound as well as Click Actions to give your document a measure of interactivity.

Why do I need Pageboy?

- It's easy to use
- It's inexpensive
- It runs on all Mac Systems (system 6 or later)
- It creates the smallest self-contained documents

Simply put, Pageboy strives to be the best. You won't find all these features in any other Mac application.

Getting Started...

Pageboy operates essentially like a word processor, so it's easy to learn. The Pageboy Shareware Kit comes with a sample document for you to practice on. I recommend that you finish reading this brief manual then try modifying the sample document.
