Problems/Solutions

- Problem:    It doesn't seem to work!
- Solution:    Perhaps QuickScrap has been turned off.  Make sure the switch in the lower left of the window is in the on position.
- Problem:    It causes problems with a certain application.
- Solution:    From the preferences dialog you can create a list of applications that cause problems while using QuickScrap.  You can add the application to a list of special applications (see Customizing QuickScrap above).
- Problem:    Some command keys no longer work with a certain application.
- Solution:    Make sure you have not set up any "Hotkeys" using the same key(s) used by an application.
- Problem:    I'm running out of space on my hard drive.
- Solution:    Check the size of the QuickScrap file from within the Finder (using the "Get Info" command).  If the file is overly large, delete some of the items and then set the maximum items to a lower number.
