

What can the ScriptRunner 1.0.4 do?

Haven't you ever wanted to see at a glance all of your data that is older than three weeks and not any more recent than the last three days? Or perhaps...

There are so many possibilities (an unlimited amount of possibilities) of what one can do with a Batch-File from MS-DOS or with a UNIX-SHELL-SCRIPT.

Assuming that one has mastered the Syntax of the Batch -language and is capable of programming. And, provided that you are working on a DOS or UNIX computer.

But, what do you do with a Mac? Afterall, everything's different with a MAC. And that's the way it should be. Distinctively better and easier to comprehend for every user. As of now, you don't have to be a computer programmer anymore in order to formulate a Script enabling you the same possibilities we've just described.

And of course that's not all!

We don't know ourselves how to approach what you can do with this program. Without a doubt there's only one thing sure to say about ScriptRunner!— It depends solely on you and your imagination what ScriptRunner can do for you.

To put these ideas into practice, ScriptRunner is the correct tool for you. ScriptRunner allows you to control the data system and network functions that Apple Macintosh are known for.

With ScriptRunner you can use processor resources, that before were barely even touched upon. Take control of the network systems, the data systems, the programs, or whatever else comes to mind...

It all depends on you. The tool is there.

The shareware version of ScriptRunner 1.0 in spite of the many possibilities it allows you, nevertheless allows you only a taste of the possibilities that the complete version has to offer. (66,00 US \$ plus 5,-- \$ for shipping)

Have fun trying it out!!!
