Installing Threshold

Threshold is a stand-alone application, designed to be run all the time in the background.   If you want Threshold to start up automatically every time you turn on or restart your PowerBook, use the following steps:

1)   Move your copy of Threshold to wherever you want to store it (in your "Utilities" folder or someplace similar).
2)   Open the folder containing Threshold.
3)   Click on the application icon once to select it.
4)
From the File menu under the Finder, choose "Create Alias".
5)
Drag the alias to the "Startup Items" folder, inside your "System Folder".
6)
Restart!   Threshold should start running automatically.

Or, if you desire, you can place the Threshold application itself in your "Startup Items" folder, which will save you a little disk space.

The Preferences file

The first time you run Threshold, it will create a "Threshold Preferences" file in your "Preferences" folder.   This is where Threshold will store all your options and preferences.

The MyBattery Link

Threshold has the ability to send and receive information to MyBattery.   Whenever MyBattery or Threshold is running, a "MyBattery Link" file will be temporarily created in your "Preferences" folder.

Registration

Once you are done installing Threshold, and if you find it useful, please consider paying the shareware registration fee.   See the appropriate chapter in this document for more information.
