Features of Word Translator
The grammar feature comes with the registered version along with other features like the ability to add and change words and translations. If you have a registered version and still don't find the features mentioned here you will receive an update soon.
The following features are scheduled for release in the coming weeks:

- Custom dictionaries - add and change words and translations
- Text to speech, let the Mac speak out the selected words*
- On-line help
- Interapplication communications - use the program from within other applications
- Grammar help and example texts
- Document translation(QuickTranslate)
- Bilingual spell-checking - use WT to check your documents for errors
- Word-quiz - guess translations and add to your vocalbury

The next major release of Word Translator, version 2.1 will be sent out   June 15th. It will include Text-to-speech, On-line help, grammar help and phrase translation. Release 2.2 is due July 15th and will add custom dictionaries, interapplication communication and the word quiz. Bilingual spell-checking will be added shortly thereafter. All these updates will be sent to registered users free of charge.
New dictionaries are constantly being added and the current ones improved. Feedback of any kind is essential to our work so please don't hesitate if you have any comments. See the readme file for more information.
