

Photo Fits

is still in development and right now it can only read in 2 dimensional images of:

byte
integer
longint
real
&
double.

Photo Fits only looks at the first header, all other headers are ignored.

Improvements will be made in later versions.

If you are looking for an application which will allow you to do more processing and analysis of your fits images...

take a look at MacPhase.

MacPhase has a large assortment of analysis, processing, and visualization tools.

Here are just a few...

File Import/Export
Fourier Transforms
Windowing
Frequency Filtering
Simple Image Math (ie. + - * /)
Convolution Filters
Support for Frame Grabbers
Macro Language
GPIB I/O
Serial I/O
External Code Support
Photoshop Plug-in Support

Plot using...

Raster
Contour
3D Wireframe
3D Surface
3D Rendered Surface
Vector
Line
and combinations of plots.

Check out the MacPhase demo located at various ftp sites, on AOL (use keyword "otter solution"), or contact:
