1.2 1.Preface

Preface

=====

Hi there!

Many thanx for e-mail that I have recived. Here is next release of my icons.
This time icons are designed for proportional modes (for eg. 640 x 512)

This time archive contains all system icons and many application icons.

Icons are designed to use first 16 colours of WB palette. They are not compatible with MagicWB, and will look ugly with standard WB palette 8(. The difference to MagicWB is that they are very colorful. If you use Magic WB You will have to remap them for my palette. It is possible because palette that I use has a part that I call LightBrown Scale (first 8 colours of my palette). Use for example Iconian and Brilliance:

- [1] Make screen shot (use QuickGrab or sth. like this)
- [2] Remap to my palette with a paint program (DPaint, Brilliance)
- [3] Cut brushes form icons.
- [4] Replace images with remapped brushes.

You should notice that Magic WB icons will still loog gray.

1.3 2. How to install

How to install

=====

1. Find a program that will allow you to set and lock first 16 colours of your WBpalette. Because many people e-mailed me that they cannot find such a tool I decided to include ProcurePrefs program written by Joseph Luk for more details see README file in drawer ProcurePens. The archive PensPrefs.LHA is kept intact. It is also available on Aminet.
I am not the author of this software. If You use it see the ProcurePens.doc file in this archive.

PROCUREPENS Copyright © by Joseph Luk. All rights reserved!

2. Change WB screenmode to use HiRes mode (640x512) use
PAL-HiRes-Lace,
NTSC-HiRes-Lace,
DBLPAL HiRes-No Flicker,
DBLNTSC HiRes-NoFlicker.

Note that you should use 32 colours screen or more!!!

=====
It will work with 16 (if PatchPens is used) colours,
but You will not be able to change WB colours !!!!!!!
=====

3. Set WB palette with standard prefs or just copy (recomended) contents of drawer Env-Archive or Prefs/ENVARC (from this archive) to your ENVARC: (SYS:Prefs/Envarc).

This drawer contains also default icons tool, disk,project for your WB. If You plan to use ProcurePens first four colours must be set to simmlar values like those shown on JBCpal_set.iff picture. If You don't want to set them manually You should copy those files.

4. Install your color-patching program (see #1).

- If You have

PensPrefs

- If You want to use included

ProcurePens

.

- If You have other color patching program see its doc.

5. Copy my icons to your drawers

Note that some of icons contains tooltypes. If You replace Your icons to new one, You will have to adjust it tooltypes.

If you do not want this to happen look on Aminet for tool that will replace images only (f.eg. it is in NewIcons archive)

You can simply replace all your icons.

1.4 Contents of drawer

Contents:

=====

-Drawer System_Icons contains all system icons copy its contents to your SYS: partition. You can simply copy it's contents to Your SYS: partition.

-Drawer Disk_Icons contains icons for your disks.
Here is

example
how to install disk icon.

-System_Icons/Prefs contains Env-Archive drawer (its contents should be copied to your ENVARC: drawer. The same files you can find in Env-Archive drawer.

-Presets drawer contains
pointer
presets.

-Applications&Misc/Applications contains icons for many applications, it also contains icons for drawer in wich you keep applications

-Drawer_Icons contains some applications drawer icons.
Here is

example
how to install drawer icon.

-Applications&Misc/Drawers contains some special drawers (f.eg. for games)
Here is

example
how to install drawer icon.

-Applications&Misc/Projects contains some project icons
Here is

explanation
how to install project/tool icon.

-Applications&Misc/Applications contains some drawers an programs icons
Here is

explanation
how to install project/tool icon.

and

example
of installation drawer icon.

```
-ToolManager_#? drawers contains
    ToolManager stuff
.
```

```

```

1.5 Newicons Notice

NewIcons Notice.
=====

Don't be afraid to change your WB palette. NewIcons package (due to it's nature) works really great with this palette. You should not be worried about it, I tested it!

1.6 Copyrights

All icons are (here comes few exceptions: I used brushes from MewIcons - Clock, Video cassette, Calendar - those are not painted and designed by me) designed by Jacek Buczaniewicz,

Copyright © Jacek Buczaniewicz, 1993-1995.

- o You cannot include those icons in any commercial package without special permission!
- o If you want to include them, please contact me (dont worry no very high fee).
- o If you want me to create set of icons for your program, please contact me (in this case I also do not expect you to pay me)
- o If you have any sugestionc, please contact me.
- o If you cannot find icon for application(s), you frequently use. E-mail me I will pain it and it will be released in update as soon as possible.

Making those icons took me very long time to produce it. I have been working on those icons for two years (THAT IS NOT A JOKE). You can spread them ONLY IN THIS ARCHIVE and do not take any fee for them (except of copying charge).

WHEN SPREADING ARCHIVE MUST NOT BE TOUCHED
ALSO PROCUREPENS.LHA ARCHIVE MUST NOT BE TOUCHED!

This set is a SHAREWARE if you want me constantly to update this icon set, please register the set. There is no constant fee for this set. If you use this icons send me something (your programs, icons, etc.). You can also send me money (How much- it depends from You). If I'll have many registred users I will constantly update this set with new icons.

If You want to use ProcurePens package You SHOULD SEND POSTCARD TO THE AUTHOR (see doc & readme files in archive ProcurePens.LHA).

1.7 How to contact

Here are my adresses:

Jully - September

Jacek Buczaniewicz,
ul.Wyb.Kosciuszki 36/17,
37-700 Przemysl,
Poland.

September - Jully

Jacek Buczaniewicz,
ul.Na Szaniec 6/32,
Kraków,
Poland.

Files and letters can be mailed to me via e-mail

`jbuczani@novell.zarz.agh.edu.pl`

PROCUREPENS and SETPENS author:

Joseph Luk.
Internet: `jluk@ctp.org`
GEnie: J.LUK
S-mail: P.O. Box 884401, San Francisco, CA 94188-4401 U.S.A.

1.8 PatchPens

If you have PatchPens:

- copy PatchPens to Your C: drawer
- Add to User-Startup folowing line:
 `c:patchpens`
- copy PensPrefs program to SYS:Prefs
- Reboot machine
- Start Prefs/PensPrefs program
- From project menu select "Open.." and select JBCpalette.iff (included in this archive)
- Press save button.
- Your WB palette is ready

1.9 ProcurePens

PROCUREPENS and SETPENS

=====

Color setting software for AGA and Workbench release 3.0 (V39) or higher.

*** Copyright©1993 by Joseph Luk. All rights reserved. ***

Internet: jluk@ctp.org

GENie: J.LUK

S-mail: P.O. Box 884401, San Francisco, CA 94188-4401 U.S.A.

This is ORIGINAL archive downloaded from Aminet (from ftp.luth.se). This archive (it's contents) is not touched by me. I included it here because I received many letters (e-mail) from people that could not find a program that sets and locks first 16 colours of WB palette.

The file JBC-ColorsConfig contains prefs to use with my icons.

How to install and use ProcurePens with JBC-IconSet (short)

=====

0. Open shell.
1. Create directory SYS:PP.
2. Extract archive ProcurePens.LHA.
3. Copy contents of this archive to drawer SYS:PP.
4. Edit your S:User-Startup - add following line at the begining:

```
run >NIL: SYS:PP/ProcurePens SYS:PP/JBC-ColorsConfig
```

5. Save changes to S:User-Startup
6. From drawer System_Icons/Prefs/Env-Archive/Sys copy file palette.prefs to Your ENVARC:Sys drawer. (I recomend You to copy all files from System_Icons/Prefs/Env-Archive to Your ENVARC: drawer). This step must be done because Workbench lock first 4 and last 4 colours from screen palette. This file contains settings of those colours (You can change last 4 colours but don't touch first four!).
7. Reboot Amiga. Changes should take effect.

=====

After installation of this software you should read it's documentation. If something fails You will find explanations and solutions there.

This software works really fine (I did not find any bugs in it) and is system friendly. If you decide to use it YOU SHOULD SEND THANKS TO THE AUTHOR ON THE POSTCARD). Here is His adres:

Joseph Luk

Internet: jluk@ctp.org

GENie: J.LUK

S-mail: P.O. Box 884401, San Francisco, CA 94188-4401 U.S.A.

To Joseph: I hope You are not angry on me for including Your soft with my icons, I will send You complete archive every time I update it.

1.10 How to install disk icons

Example of installation: (replace App: with name of your partitions)

To use them delete disk.info from your partition "App:"

```
CLI> delete App:disk info
```

copy HD_App_Disk.info (or other choosen icon) to your "App:",

```
CLI> copy Disk_Icons/HD_App_Disk.info to App:
```

rename App:HD_App_Disk.info to App:disk.info

```
CLI> rename App:HD_App_Disk.info to Disk.info
```

follow this steps for each partition you want to.

To use RamDisk icon do this:

make directory SYS:RDIcon

copy RamDisk.info to this drawer

add to Your User-Startup line:

```
copy SYS:RDIcon/RamDisk.info to RAM:disk.info
```

Now after reboot your Ramdisk will have new icon.

1.11 How to install drawer icon

Example of installation:

You can simply drag-&-drop them to destination.

If the name of icon does not mach your program or drawer (egzisting) then use rename from Workbench icon menu.

Or: (replace App:MyProgram with name of your partition:drawer)

To use them delete App:MyProgram.info from your partition "App:"

```
CLI> delete App:MyProgram.info
```

copy def_Application.info (or other choosen icon) to your "App:",

```
CLI> copy Drawer_Icons/def_Application.info to App:
```

rename App:def_Application.info to App:MyProgram.info

```
CLI> rename App:HD_App_Disk.info to Disk.info
```

follow this steps for each drawer you want to replace.

1.12 How to install other icons

To instal other icons You can simply drag-&-drop them to destination

If the name of icon does not mach your program or drawer (egzisting) then use rename from Workbench icon menu.

1.13 ToolManager Icons

ToolManager users!

I have included few icons to use with ToolManager 2.1

There are two drawers:

1. ToolManager_Buttons
drawer contains set of animated buttons (2 frames) they are intended to use to open a new TM dock.
2. ToolManager_brushes
Drawer contains single (not animated) images for use to launch single application form TM.

1.14 ProcurePens package

PROCUREPENS and SETPENS

=====

Color setting software for AGA and Workbench release 3.0 (V39) or higher.

Internet: jluk@ctp.org

GENie: J.LUK

S-mail: P.O. Box 884401, San Francisco, CA 94188-4401 U.S.A.

This is ORIGINAL archive downloaded from Aminet (from ftp.luth.se). This archive (it's contents) is not touched by me. I included it here because I received many letters (e-mail) from people that could not find a program that sets and locks first 16 colours of WB palette.

After installation of this software you should read it's documentation. If something fails You will find explanations and solutions there.

This software works really fine (I did not find any bugs in it) and is system friendly. If you decide to use it YOU SHOULD SEND THANKS TO THE AUTHOR ON THE POSTCARD).

1.15 About Presets

Drawer Presets contains three files with pointer preferences. If You copy contents of drawer Env-Archive to Your ENVARC: directory You will have nice hand pointer, but if You don't like it You can choose OS2Style.pointer or VGA.pointer (Inversed colours of arrow). Try them.

1.16 What is to come

I am plannig to develop this package as well as icons for non- ←
laced (640x256)
resolutions. In september 1995 you can expect archive with set of WB backdrops (about 30 nice looking pictures and brushes are done till now). Of course You

can expect more icons.

Maybe someone will write installer script for this package. This set also needs few tools, but I am not a programmer and You cannot expect me to do all this stuff by myself. I am waiting for propositions from programmers (maybe from ESCOM??? :).

I would like all Amigas WB to look really nice an colorfull!

If You want me to create icon for Your program send me it (no, not program but its .info file with all tooltypes). Of course if You are the author You can send me your program - this will be treated as registration (in this case don send me crumpled or cut down versions).

Until now nobody has registered icon set for "lower" resolutions. I think I dont require You to send me Your Amiga or car... So please, if U use it register. Magic WB become commercial package (SASG Group). Don't make me to sell my icons. If U want me to spread on Aminet not cut down version, register.

How to register see

Copyrights & registration
