23. HINTS TXT
24. TIPS TXT
25. LIESMICH WRI
26. README WRI

Shareware

27. BESTELL TXT
28. ORDER TXT

1.2 System Requirements

Atlantis 2.2 requires Microsoft Windows 3.1 or above, the System Monitor requires the Enhanced Mode of Microsoft Windows 3.1 or above.

1.3 Network Installation

If you want to use Atlantis in a network and install it only to the server, please follow these steps:

- Install Atlantis to a directory on a hard disk of the server.
- In this directory, you will find a file titled ATLANTIS.INI. You have to copy this file to the Windows directories of the workstations.
- Setup copies the file TSS4D.DLL to the Windows System directory of the computer where you run SETUP.EXE. You also have to copy this file to the Windows System directories of the workstations.

Atlantis 2.2, once started, will create the following files in the Windows Directory of the workstation.

ATLANTIS.INI	
ATLANTIS.CFG	Configuration file and main desktop
ATLFLDR.xxx	Folder file number xxx

2. Changes

2.1 New in Version 2.2

Despite several improvements and changes, the Drive-Manager has been added.

2.2 New in Version 2.1

See Atlantis online help for detailed information.

2.3 New in Version 2.0

- Folders

It is now possible to create a folder in a register that itself can contain further registers and folders.

- Desktop Registers

All registers in the main window of "Atlantis" have the option "Hide Objects on Deactivation". This enables you to use any register just like a separate desktop, because the register hides its objects when it is deactivated and shows them when it is activated.

- Cross Connections

Cross connected objects always have the same properties.

- System Information

"Atlantis" shows you some information about your system in the "Info" dialog box.

- *Colors*

It is possible to choose the colors of the registers freely.

- *Password Protection for Import/Run*

It is now possible to password protect the dialog boxes "Import" and "Run".

- *Password Options*

You can tell "Atlantis" when it should ask or should not ask passwords.

- *Enhanced Status Bar*

The new status bar shows you the current time and your free system resources.

- *Enhanced Task List*

A new Task List was necessary because of the Desktop Registers.

- *Enhanced Quick-Task*

The new Quick-Task offers more possibilities and options to change.

- *Menu Manager*

Menu Manager enables you to configure the right and middle mouse button for your applications. You can access any menu or menu command at any time.

- *System Monitor*

System Monitor checks your memory and resources and warns you if a certain threshold is exceeded. You can change its settings by clicking into System Monitor with the right mouse button.

- *Alphabetic Object Sort*

The objects of a register can be arranged in alphabetic order.

- *Start Applications with Parameters*

"Atlantis" will ask you for parameters if you open an object while you keep the Ctrl key pressed.

3. Copyright

Atlantis is copyright 1994-95 by Thomas Schoepf and Martin Stumpf. It is not allowed to change the included files.

In no event will the authors of this package be liable to you for any damages, including lost profits, lost savings, or other incidental or consequential damages, arising out of the use or inability to use these programs.

No one else is allowed to distribute registeres copies of Atlantis !

6. Differences to the Registered Version

The Shareware version differs from the registered version in a few points:

1. "Shareware" text in the title bar of Atlantis
2. Shareware reminder when starting and exiting Atlantis
3. After more than 25 days of use (shown in the Shareware reminder) the Shareware reminder will pop up every ten minutes.
