

Bible Windows^(TM):
The research tool for professionals^(TM)

Do you want to study the Bible in the original languages? Do you want to do Greek and Hebrew word studies? Do you want to search for these words alone, in groups, or in particular grammatical constructions?

If you answered "yes" to any of these questions, then chances are Bible Windows is for you. Bible Windows is the unique Bible software tool designed for scholars, students, pastors, and laity who want to do serious Bible study. Bible study in the original languages, with an English translation always handy.

Bible Windows is the computer Bible tool that lets you search the Greek and Hebrew texts not only for words, but also for these words in specific grammatical contexts. In addition, every word in the Greek and Hebrew texts is completely parsed. With the click of a mouse, you can see if you are working with an aorist or an imperfect; a Piel or Pual.

When you complete a search, Bible Windows makes it easy to use your results. Concordance lists can be viewed, printed, or saved. Clicking on a verse reference takes you immediately to its book and context. Or, a list of verse references can be highlighted and copied to the Windows clipboard. Bible Windows can then copy these verses into your word processor, either as a list or as complete verses. You can even get English verses to appear with the original language!

Best of all, Bible Windows is easy to use. Because it is built around the standard Windows interface, you probably already know how to use much of it. But don't let its ease of use fool you. Bible Windows is feature rich, including Power Mousing, cut and paste clipboard support (to get words or verses into your word processor easily), and instant verse lookup.

Bible Windows™:
The research tool for professionals™
 Samples

Bible Windows can easily and quickly print either interlinear text or plain text:

1.1	Pau=loj	kaiì	Timo/qeoj	dou=loi	Xristou=	¹Ihsou=

Bible Windows has backwards compatibility

Bible Windows can transfer Bible texts and search results to two of the most popular DOS solutions for Greek and Hebrew word processing: Nota Bene Lingua and Word Perfect (with either the Greek language module or Scripture Fonts). *This backwards compability helps to protect your current investment in DOS software.*

New! Louw-Nida, Greek-English Lexicon

The Louw-Nida Greek-English Lexicon is a unique, 1,200 page lexicon (the electronic version includes both printed volumes). This remarkable dictionary is based on the concept of semantic domains. There are over 90 major domains such as "Learn", "Time", "Religious Activities" and many more!

This hypertext package allows you to add book marks and notes, and includes many viewing and searching features. The lexicon has an English word index, a Greek word index and a Scripture index. The lexicon is integrated with Bible Windows so that you can instantly jump into the Greek word index. While this can be used as a stand-alone product, Bible Windows greatly enhances its usefulness.

Details:

The Greek New Testament is the UBS 3rd corrected edition. The analysis is based on the Friberg tagged text as distributed by CCAAT at the University of Pennsylvania. The dictionary forms were added by Silver Mountain Software from a list provided by SpiritWare (Seattle, WA).

The Greek dictionary is the UBS dictionary by Barclay Neuman.

The Hebrew tagging was done at Westminster Seminary under the direction of Alan Groves. The Hebrew dictionary was done for Silver Mountain Software at Columbia

Biblical Seminary under the direction of Alex Luc.

Hard disk requirements:

The English translations and the Vulgate: 4.5 to 5 MB (The RSV includes the Apocrypha and the KJV does not.)

Greek NT: 4 MB

Hebrew Old Testament: 10 MB
