Additional Information about FMDU

[Deinstalling FMDU...](#)
[How to Register FMDU...](#)
[Copyrights & other Legal Stuff...](#)

Preferences

The "Preferences" dialog allows you to specify how you want FMDU to present its information. You specify your choices for four main areas:

- ▶ **File Manager Menu Name** Pick the name to appear on File Manager's Menu Bar. Choose an item that has an underlined (hot-key) character that is different from any other menu bar item.
- ▶ **Analyze Files in:** Choose whether File Analysis should be done on just the selected directory or if all subdirectories of the selected directory should be included.
- ▶ **Summarize files by:** Choose whether File Analysis should be of All Files or just those that have a File Manager association.
- ▶ **View by:** Choose the default sequence in which to present File Analysis data. All three sequences are available on the display; this choice defines only the initial sequence.

Drive Information

"Drive Information" displays information about the selected disk drive as well as some information common to all drives in the system. At the top the DOS **drive letter and Volume Label** are listed. The next line displays the **current directory** for that drive. Following that the **drive type** (fixed, removeable or remote) is displayed. If the drive is a "remote" (networked) the **network path** is displayed.

▶ The disk's **Total Size and FreeSpace** (available) is displayed. Occasionally *Windows* is unable to provide the available disk space and you will see the word "Unavailable" displayed in it's place. Reselecting the desired drive will usually provide the sizes.

If SmartDrive is installed the following information is provided:

▶ SmartDrive **version number**.

▶ **Cache size** - This is the *Windows* cache size currently in use.

▶ Number of **bytes waiting** to be written to disk. If you are using the SmartDrive "lazy", or delayed-write caching (see below) this figure is of interest. It gives you an idea of how much data may be at risk in the event of an immediate power loss or other catastrophic system "crash".

▶ **Average "Hit" ratio** - The percentage of times disk accesses can be satisfied from data in the cache without having to read from the physical disk. The larger this number the better. This is an average computed from all disk accesses since *Windows* was started.

▶ **Drive "X" is** (Not cached/Read-only Cached/Read & Write Cached). Describes caching enabled for the currently selected drive. Note that if *DoubleSpace* (see below) is installed it would be common for your compressed drives to show No caching since the underlying (Host) volume will be cached.

If DoubleSpace is installed the following information is provided:

▶ DoubleSpace **version number**, and if this drive is compressed, the Host drive letter, Compressed Volume File (CVF) name and actual CVF file size are given. The CVF file size is the uncompressed size of the volume; not it's content size.

File Type Information (1 of 2)

This dialog displays information about the selected directory(s). For each file type analyzed the following information is provided in a scrolling listbox:

- ▶ **Type** - The DOS file extension. All files with the same extension are considered to be the same type.
- ▶ **Count** - The number of occurrences of this file Type.
- ▶ **Size** - The total number of bytes occupied by all files counted.
- ▶ **Average** - Average size (*Size* divided by *Count*).
- ▶ **Percent** - The percentage of all files analyzed that this *Type* represents.

At the bottom of the dialog the following summary information is shown:

- ▶ **Not Included** - Files not included in the main display above. This line will only be used when you have chosen to analyze only files with File Manager associated extensions and other types exist in the selected directory.
- ▶ **Total** - Total of all files in the selected directory.
- ▶ **New or Changed** - This line displays all files that have their DOS 'Archive' bit set; IE: are "New" or "Changed" since the last system back-up was performed. This number gives you an idea of how vulnerable you may be to data loss in the event of a catastrophic disk failure (Head Crash!).
- ▶ **Hidden Files** - Files with the DOS 'Hidden' bit set. Typical files found in the root directory (C:) would be IO.SYS, MSDOS.SYS etc.
- ▶ **System Files** - Files with the DOS 'System' bit set. Typical files found in the root directory (C:) would be IO.SYS, MSDOS.SYS etc.
- ▶ The **View by:** buttons allow you to re-sequence the main list in the labeled orders. This selection does not change the default setting from the [Preferences](#) dialog.
- ▶ **Copy to Clipboard** - Copies the statistics from this dialog to the clipboard, from which you can "paste" them into a spreadsheet or text document. An easy way to get a printed report would be to copy to the clipboard and then paste into *NotePad*, from which you can then print the report on your printer.
- ▶ **More >>** - Opens an additional [dialog with more data](#) about the selected directory.

File Type Information (2 of 2)

This dialog displays additional information about the selected directory(s):

- ▶ The **number of subdirectories** are indicated. This number will always be zero if you have chosen to analyze only the selected directory and not the subdirectories.
- ▶ The **number of 0-length files** is indicated. Zero-length files indicate an entry has been made to the DOS file directory, but no data exists on the disk for the file. These entries are frequently created when something goes amiss. You may wish to investigate and possibly delete them.
- ▶ **Largest and Smallest files** - as described.
- ▶ The disk's **Total Size and FreeSpace** (available) is displayed. Occasionally *Windows* is unable to provide the available disk space and you will see the word "Unavailable" displayed in it's place. Reselecting the desired directory will usually cure this.

Click here to review [File Type Information \(1 of 2\)](#).

DoubleSpace Information

This menu item only appears if your system has the Microsoft MTOOLS File Manager Extension installed (included with DOS 6.0). It provides access to the Microsoft DoubleSpace Help file.

About FMDU

File Manager Disk Usage was written by Kurt Herzog in Borland Pascal. It was released as Shareware in December of 1993 after 6 months of development and testing. Naturally enough a serious bug surfaced immediately, requiring the release of Version 1.2 in January of 1994.

Release History:

January 1994 Rel. 1.2 - Bug fix for use with DOS Version 5
December 1993 Rel. 1.1 (Initial public release)

Planned enhancements:

- 1) Directory size analysis
- 2) Additional file compression data
- 3) Fragmentation analysis
- 4) Directory & statistics printing capabilities

Deinstalling FMDU

HOW TO REMOVE FMDU FROM YOUR SYSTEM

=====

Sorry you feel you don't need this program.
Here is what you do to get rid of it:

The files originally installed were:

FMDU.DLL
FMDU.HLP

These two files should be together in the directory in which they were installed. The default installation directory is "C:\WINDOWS", but any directory could have been used. If you are unsure where they are located choose "Search.." from the File Manager "File" menu and enter "FMDU.*" as the file name to search for. Choose the root directory of the installation drive (most commonly "C:\") and choose to search all subdirectories. When you locate the files simply delete them.

You will need to edit the WINFILE.INI file, which can be found in the *Windows* directory. First make a back-up copy by using File Manager to copy the file, renaming it "WINFILE.BAK". Load WINFILE.INI into NOTEPAD or some other suitable text editor and find the section labeled "[AddOns]". You should see a line following that reads "FMDU=...FMDU.DLL". (... is the directory you installed FMDU in). Delete this line. Find the section labeled "[FMDU Preferences]". Delete this section header line and the line following that reads "Options=...". If you registered FMDU you will have two additional lines: "Registration_Number=..." and "Registered_To=...". Delete these as well.

Please pass your installation disk along to someone else... maybe they can use the program (and the author can use the registration fees!)

Thanks for trying FMDU...

How to Register FMDU

FMDU is Shareware. Shareware is **not** "free" software! If you find this program useful please register with the author by paying the regular registration fee for this program of \$9.95 (US). If this program is not worth \$9.95 to you, don't use it!

When you register you will receive a license number that will, when installed, prevent the opening reminder "About FMDU" screen from appearing.
Registered users will receive notification of the next release of FMDU.

Please notice that FMDU does not "nag" you to register, other than gently reminding you to register the first time you use it in each *Windows* session. The author is depending on your voluntary registration to keep up his morale and encourage him to produce bigger and better Shareware programs (He also has 3 college-age children and a wife to support).

Please pass along copies of FMDU to your friends and favorite bulletin boards. Be sure to include all of the original distribution package, which includes FMDU.DLL, FMDU.HLP, and README.TXT. Your installation package may also have included the installation program files INSTALL.EXE and INSTALL.INF.

Registration Form

Print this form on your printer by selecting "Print Topic" from the Help "File" Menu.

File Manager Disk Usage Registration Form

Version 1.2 01/94

Mail this form (with your check or money order) to:

Kurt P. Herzog
1440 N.E. Tenth Street
Grants Pass, OR 97526 USA

Your Name: _____

Address: _____

City: _____

State: _____ Zipcode: _____

Register FMDU for each machine on which the program is used.
Enclose \$9.95 (Check or Money Order in US funds) for each copy of FMDU being registered:

Number of copies _____ x \$9.95 = \$ _____

(The remainder of this is optional, but the author would like to know...)

Where did you get your copy of FMDU?

Comments? Criticism? Accolades?

THANKS FOR YOUR SUPPORT!
