Introducing Font Works

Font Works is the first integrated font solution, containing a comprehensive library of high-quality fonts and the tools to use them effectively. Font Works includes many features that make it easy to edit, print, and share documents:

- **A large library of high quality TrueType fonts.** Font Works provides the variety you need to enhance the appearance of all your documents. It uses ElseWare's new [Infinifont](#)

® technology to create TrueType fonts that use about one-fifth the disk space of other fonts. And the Font Works library guarantees you can use your [printer fonts](#) for faster printing and have accurate WYSIWYG onscreen display.

See [Font Works font list](#)

- **Font management utilities.** Keep your application font menus short and easy to use by hiding fonts you don't use everyday. Organize all of your fonts (including TrueType and ATM fonts) individually or in groups. Open a document containing a [hidden font](#) and our unique OpenFont

™ technology will automatically provide the font. Plus, you can view or print samples of each font installed on your computer.

- **A reliable font replacement solution.** Ever share a document with co-workers, only to find you don't have the same fonts installed? Windows usually replaces the missing font with Arial or Times New Roman, changing the line breaks and the look of the document.

The [PANOSE Typeface Matching System](#)® built into Font Works carefully matches fonts based on visual characteristics and character spacing (or "metrics"). PANOSE visually matches over 2,000 of the most popular TrueType and ATM fonts and preserves line endings for several hundred more. Plus, Font Works notifies you when it replaces a missing font and lets you review and edit the font replacements in each open document.

See [PANOSE Typeface Matching System](#)

- **Interactive advice on using type effectively.** The **Advisor** makes it easy to choose the right fonts for your documents. Just provide a few details about the document you're creating, and the Advisor suggests several pairs of fonts that work well together. The **Type Tutor** is an interactive online guide that teaches the fundamentals of working with type. Both the Type Tutor and the Advisor were written by Daniel Will-Harris, a popular author on typography.

About the Font Works demo

This demo is missing some of the features contained in the full retail version Font Works. Specifically:

- **Reduced font library.** This demo contains 39 fonts, not the full 152 included with the retail version.
- **Limited font management.** This demo version does not allow you to create or modify font groups. It does contain several predefined groups and lets you move them on and off application font menus.
- **Fewer PANOSE font replacements.** [PANOSE](#) typeface matching has been disabled in this demo version of Font Works. But, if you choose a [printer font](#) corresponding to one of the fonts in the demo, Font Works will provide a screen font even if you do not have one installed.
- **Fewer Advisor recommendations.** The smaller font library reduces the number of recommendations available from the Advisor.
- **Abridged Type Tutor.** The Type Tutor contains only three sample topics, compared to the 53 topics in the retail version.
- **No network administration features.** This product does not support centralized network font management.

The Font Works font list

The retail version of Font Works contains 152 high quality TrueType fonts. Based on ElseWare's new [Infinifont](#) technology, the entire font library uses about one-fifth the disk space of other font libraries.

The Font Works font list includes a variety of classic text and display faces, some original designs, plus the screen fonts for H-P LaserJet and PostScript laser printers. If you format your documents using printer fonts, Font Works provides the matching screen font so you always get WYSIWYG on-screen display.

The list below highlights the major font families in the retail version of Font Works. The fonts included with this demo are indicated with an asterisk (*). Clicking the font name in the left column displays a sample of an actual ElseWare font.

PANOSE Typeface Matching System®

Font Works includes the PANOSE Typeface Matching System, a new technology that provides a reliable [font replacement](#) solution for Windows, Macintosh, and other operating environments.

Like a nature guide that identifies a particular plant by classifying visual characteristics such as its bark or leaves, PANOSE uses a numbering system to represent key visual characteristics of a font, including contrast, proportion, and serif style.

PANOSE numbers are stored in a database included with Font Works. The database can visually match over 2,000 popular TrueType and Type 1 fonts, and also provides matching line endings (or "metrics") for hundreds of the most popular fonts.

When a document requests a missing font, PANOSE searches its database and finds the font with the nearest classification number. Font Works then uses that font in place of the original, missing font. Of course, you can turn to the Replacements page to view and edit the current font replacements.

NOTE: The PANOSE matching has been limited in this demo version; see [About the Font Works demo](#) for more information.

Removing this demo from your system

After you're finished evaluating the Font Works demo, you may want to remove it from your system. The setup program includes an option that quickly un-installs Font Works.

To remove Font Works from your system:

- 1 Insert the Font Works demo diskette in drive A:.
- 2 Choose the Run command from the Edit menu in either the Windows Program Manager or File Manager.
The Run dialog box appears.
- 3 Type **a:\setup** in the **Command Line** box and choose OK.
The install program appears and displays a prompt confirming that Font Works is installed on your system.
- 4 Choose the **Remove** button.
The setup program will restart Windows and remove Font Works from your system.

PANOSE Typeface Matching System®

PANOSE visually describes and matches fonts using key visual characteristics. When you open a document containing a font that's not on your system, PANOSE finds the closest replacement.

Infinifont®

A new technology for creating TrueType fonts. Instead of reading font information from large (30-60K) files on your disk, Infinifont uses small (3K) descriptor files to create fonts in memory when they're needed. The Font Works font library uses five times less disk space than other TrueType fonts.

printer font

A font that is built into the printer's ROM. Using printer fonts provides faster print performance than downloading a font. Most application font lists include a small printer symbol  next to printer fonts.

font replacement

Font replacement occurs when you open a document containing a font not installed on your computer.

hidden font

Hidden fonts are installed fonts that don't appear on the font lists in your Windows applications. If you open a document that requests a hidden font, however, Font Works will provide the font.
