Help Edit Tutorial Demo

This is the first help <u>Topic</u>, and it is also the main Index or Contents page.

You can reach this page from any place in the help system by clicking in the Contents button.

The <u>second</u> Topic can be accessed by clicking the forward <u>Browse</u> Button.

This is the second Topic

This topic is linked to the first topic via a browse sequence. Try it and see. Click <u>Here</u> to view the last Topic.

Help Edit can insert bitmaps, the even into the middle of sentences.

This is the third and last Topic of our Help Demo Help File.

It has been put in a separate file to illustrate the modularity of Help Edit. The <u>Project file</u> holds the information regarding the location of all the <u>RTF</u> files needed to build the help file, as well as the topics and <u>definitions</u> used.

Despite being spread over several files Help Edit can make the creation of <u>Hypertext</u> links between files a simple process.

Viva La Help Edit!.

Browse

The Windows Help system has the facility of Browse buttons, which can be used to guide the user in a particular direction, when logic would indicated that a particular sequence of Topics is desired. You can create browse sequences using Help Edit by defining the parent and sequence number of the Topics that you wish to be grouped together.

Definition

A definition in the Help system is an explanation of a word or phrase that might not be famialiar to the user. Often this is a techical term that has specific meaning in the context in which it is used. When the user clicks the mouse button on words that have definitions attached to them, a pop up window appears giving this extra information, and remains until the user presses enter, or clicks the mouse again.

HyperText

HyperText is a form of electronic book in which the reader, instead of following a preset path from beginning to end, is able to move around by means of selecting key words or phrases within the 'Book' that perform a jump to a new location within the 'Book'.

Project

Help Edit works with Project files. This file contains information about the files your Help file needs, and all the topic and definition information. This makes it easier to create the HPJ file that is needed by the Microsoft Help Compiler.

It also makes it easier for you to keep track of your topics. The burden of creating and maintaining a list of topic and definition labels for your hypertext links is automated.

RTF

The Microsoft Help Compiler requires your Topic files to be in RTF (Rich Text Format).

This is a format devised by Microsoft in 1987, and is only supported by the top of the range worprocessors such as Microsoft Word and WordPerfect. Help Edit removes the need for this by compiling your text files in a suitable RTF format.

Topic

The term Topic in this context refers to a HyperText page of information. Each Topic has a label by which it is accessed, and optionally a Title which can be used when performing a search.
