NT Screen Saver Pack

The NT Screen Saver Pack extends the life of your computer monitor with the following colorful screen savers: "Clock", "Dancing Lines", "HyperCycloids", "Life", "Snakes", "Spheres", and "Zoom".

Required Hardware and Software

'386 or better CPU running Microsoft Windows NT 3.1 or later.

Installing the Software

1.   Copy all .scr files into NT's \system32 directory.

2.   Go to the Control Panel and double-click the Desktop icon.
         In the Screen Saver box, select a screen saver.

3.   Press the Test and Setup buttons to preview and configure
         the screen saver.

Enabling the Screen Saver During Logon (from MS Knowledge Base):

You can enable the screen saver to start during logon if no user logs on immediately. This is done as follows:

1.   Start Registry Editor (REGEDT32.EXE) and select the HKEY_USERS hive.

2.   Go to the following subkey: \DEFAULT\Control Panel\Desktop

3.   From the parameter list, select ScreenSaveActive.

4.   From the Edit menu, choose String.

5.   In the String field, change the value from 0 to 1 and
         choose OK.

6.   From the parameter list, select SCRNSAVE.EXE.

7.   From the Edit menu, choose String.

8.   Enter the filename of the screen saver you want to use,
         e.g. "spheres.scr".

9.   Similarly, edit the String field for the ScreenSaveTimeOut
         parameter, and enter the time (in seconds) you want the
         screen saver to wait before activating.

After you complete these changes and shut down Windows NT, the screen saver should activate if a user fails to log on within the time specified by ScreenSaveTimeOut.

Distribution and Payment

The NT Screen Saver Pack may be freely copied without cost, provided it is not changed in any way. If you find the software useful, please send $5.00 to:
