About Time Synchronizer

Time Synchronizer is used to synchronize time on multiple computers running Microsoft Windows NT on the network. Computers may operate in different time zones.

It is specifically important to have all the computers synchronized to one time source when using centralized user profiles.

You must designate one or more computers as *time servers*. Primary time servers usually have hardware devices for time synchronization, such as *radio-synchronized clocks*. Other computers are *time clients* and synchronize their system time with the specified *time server*.

It is possible for the computer to act both as a client and as a server. This way you can build a hierarchical master-slave time synchronizing network.

Installing Time Synchronizer

During Time Synchronizer installation process, you accomplish the following:

- install Time Synchronizer service
- configure Time Synchronizer service
- define Time Synchronizer startup status

To install the Time Synchronizer, you should do the following:

1. Log on to Windows NT as Administrator
2. Copy timesync.exe, timesync.cpl and timesync.hlp to your SYSTEM32 directory
3. Change current directory to your SYSTEM32 directory and run this command:
timesync /install
4. Run Control Panel and double click on the Time Synchronizer icon
5. Configure Time Synchronizer (for more information, see [Configuring Time Synchronizer](#))
6. Double click on the Services icon in the Control Panel
7. Select Time Synchronizer from the list and press Startup button
8. Select Automatic on Startup and press OK
9. Start the Time Synchronizer service, if you have not done so already

To uninstall the Time Synchronizer, you should do the following:

1. Log on to Windows NT as Administrator
2. Change current directory to your SYSTEM32 directory and run this command:
timesync /uninstall
3. Delete timesync.exe, timesync.cpl and timesync.hlp from your SYSTEM32 directory

Configuring Time Synchronizer

To configure Time Synchronizer, start Control Panel and double click Time Synchronizer icon.

Use the Time Synchronizer dialog box to view and manage the Time Synchronizer service configuration.

Server name

Specify the name of the computer acting as a time server for this computer. The form of the computer name depends on the underlying network protocol used to connect the two computers.

Slow connection

Check this box if the connection to the specified time server is over a slow link. Time Synchronizer will compensate for the round-trip delay times on the link.

Update interval

Specify the time interval in seconds after which the local time is synchronized with the servers time.

License Agreement

This software is licensed free of charge to everyone except for use in a business, commercial, government, or institutional environment. The later should register this software after 30-day evaluation period.
