

**Analytical Solutions Inc.
Presents**

**SQL Workshop™
3.0**

**Introducing The First Windows
Based Stored Procedure
Debugger For MS/Sybase SQL
Server Databases**

Copyright 1995 - Analytical Solutions, Inc. All Rights Reserved.

SQL Workshop 3.0 is a **powerful tool for querying, creating, and maintaining database objects.**

SQL Workshop is the **perfect supplement when using Powersoft's Powerbuilder, Microsoft Visual Basic, or any other GUI based development tool.**

Continue - **Left mouse button (Page Down Key)**

Quit - **Escape Key**

Back 1 screen - **Right mouse button (Page Up Key)**

Copyright 1995 - Analytical Solutions, Inc. All Rights Reserved.

Most database tools are built for Database Administrators (DBA) and priced accordingly. SQL Workshop, although capable of performing all Database Administration functions, is tailored towards the developers of database objects and applications.

Continue - **Left mouse button (Page Down Key)**

Quit - **Escape Key**

Back 1 screen - **Right mouse button (Page Up Key)**

Copyright 1995 - Analytical Solutions, Inc. All Rights Reserved.

For example, application **developers spend a majority of their time** creating and testing database objects, managing table data, querying table data, and other similar development tasks. **They spend little, if any time** creating database devices, allocating databases, managing database space, and other tasks usually performed by database administrators.

Continue - **Left mouse button (Page Down Key)**

Quit - **Escape Key**

Back 1 screen - **Right mouse button (Page Up Key)**

Copyright 1995 - Analytical Solutions, Inc. All Rights Reserved.

SQL Workshop is the **only tool** that **focuses on the application developer** and provides all of the functionality client/server developers need to effectively do their jobs at a price that is **affordable to even the smallest development shops.**

Continue - **Left mouse button (Page Down Key)**

Quit - **Escape Key**

Back 1 screen - **Right mouse button (Page Up Key)**

Copyright 1995 - Analytical Solutions, Inc. All Rights Reserved.

Major features of SQL Workshop include:

- SQL Server **Stored Procedure Debugger**
- Compares and transfers** data between tables
- Windows interface** for the SQL Server Bulk Copy Program (**BCP**)

Continue - **Left mouse button (Page Down Key)**

Quit - **Escape Key**

Back 1 screen - **Right mouse button (Page Up Key)**

Copyright 1995 - Analytical Solutions, Inc. All Rights Reserved.

-  **Reverse engineers** database **objects** (tables, indexes, procedures, etc.).
-  **Automatically creates SQL SELECT queries** for you.
-  **Imports and exports table data** from/into Excel Spreadsheets.

Continue - **Left mouse button (Page Down Key)**

Quit - **Escape Key**

Back 1 screen - **Right mouse button (Page Up Key)**

Copyright 1995 - Analytical Solutions, Inc. All Rights Reserved.

-  **Searches for text** in SQL Server objects throughout an entire server.
-  **Extensive On-Line Help and SQL Syntax Reference.**
-  **And more....**

Continue - **Left mouse button (Page Down Key)**

Quit - **Escape Key**

Back 1 screen - **Right mouse button (Page Up Key)**

Copyright 1995 - Analytical Solutions, Inc. All Rights Reserved.

SQL Workshop **can access any ODBC compliant database** (including Sybase System 10) which distinguishes it from similar database products.

Continue - **Left mouse button (Page Down Key)**

Quit - **Escape Key**

Back 1 screen - **Right mouse button (Page Up Key)**

Copyright 1995 - Analytical Solutions, Inc. All Rights Reserved.

SQL Workshop **increases your productivity** and **reduces your development time** by **automating many of the tasks** you perform to develop and maintain database objects.

For example, SQL Workshop generates for you, the SQL necessary to create all types of stored procedures.

Continue - **Left mouse button (Page Down Key)**

Quit - **Escape Key**

Back 1 screen - **Right mouse button (Page Up Key)**

Pop Up menus are available by clicking the right mouse button over an object. They enable you to quickly accomplish tasks related to a specific object. For example, the Pop Up menu for the Column List enables you to build a SQL Select Query for ALL COLUMNS or just for the columns selected.

We'll use the Build SQL Statement option to build a query for the columns we've selected.

SQL Workshop builds a SQL SELECT query for the columns you selected. Query Windows are used to create and execute SQL queries.

You can enter and execute any valid SQL Query from a Query Window.

Up to 10 different Query Windows can be opened at one time.

Query - 1 - System10

```
SELECT employees.ssn, employees.first_name, employees.last_name FROM employees
```

Enter 1 or More SQL Statements To Execute

employees
publishers
roysched
sales
salesdetail

In addition to using Pop Up Menus, you can use the toolbar to quickly accomplish tasks. SQL Workshop provides a toolbar button for the most commonly used tasks.

The RUN QUERY toolbar button is used to execute the SQL in a Query Window.

Query - 1 - System10

```
SELECT employees.ssn, employees.first_name, employees.last_name FROM employees
```

5 Row(s) Processed By Query

All Rows

3/13/95

7:53 PM

Results - 1 - System10

ssn	first_name	last_name
143335612	Daniel	Barney
158448098	John	Little
165621098	Mark	Sachais
187326782	Andrew	Soccer
210980230	Betsy	Frear

Query 1 - System10

```
SELECT employee
employees FROM
```

Query Results are displayed within a Query Result Window where they can be viewed and printed.

SQL Workshop can also automatically load Query Results into your favorite text editor.

Enter 1 or More SQL Statements To Execute

Active Datasource: System10

Tables/Views

- au_pix
- authors
- discounts
- employees
- publishers
- roysched
- sales
- salesdetail

Query Menu:

- Load Result Into Grid
- Save Result In Export Format
- Supress Result Set Column Headings
- Distinct
- Build SQL SELECT as VIEW
- Select All Columns Ctrl+A
- Build SQL SELECT Ctrl+L
- Where Clause Ctrl+W
- Order/Group By Clause Ctrl+G
- Expression Builder
- Set Rowcount
- Run Query Ctrl+E

SQL Workshop provides many powerful features related to running queries.

For example, you can load a result set into an editable grid. This enables you to edit the results of your queries which updates the tables used in the query. SQL Workshop is the only tool of its kind that lets you do this.

You can also save a query result in a text delimited file that SQL Workshop can automatically load into a text editor or a Microsoft Excel spreadsheet. The text delimited file can be used to import data into a table.

5 Row(s) Processed By Query All Rows 3/13/95 7:55 PM

Results - 1 - System10			
ssn	first_name	last_name	
143335612	Daniel	Barney	
158448098	Edit The Results	Little	
165621098	Mark	Sachais	
187326782	Andrew	Soccer	
210980230	Betsy	Frear	

Here's an example of a result set in an editable grid. Changing the result set data updates the underlying tables the result set was created from. An unlimited number of tables can be used and updated in a single query.

In our example above, the first_name field in the employee table will be changed.

```
SELECT
employees
```

Double Click On a Row To Display The Index Definition Text

All Rows

3/13/95

employees - Table Details

Active

Owner: dbo

Rows in table: 5

Columns:

Name	Type	Length	Decimals	Nullable	
ssn	int	4		Yes	↑
first_name	char	20		Yes	
last_name	char	30		Yes	
middle_init	char	1		Yes	↓

Indexes:

Name	Indexed
emp_ix	ssn

Triggers:

Select:
 Insert:
 Update:
 Delete: dbo.emp_delete

Now that you've seen some of the query capabilities of SQL Workshop, let's take a look at how SQL Workshop helps you manage database objects.

SQL Workshop enables you to easily reverse engineer database objects.

This is the Table Details Window. It displays information about the columns in a table, indexes of a table, and any SQL Server Triggers on the table.

Double Click On a Row To Display The Index Definition Text All Rows 3/13/95 8:08 PM

employees - Table Details

- Active
- au_pix
- authors
- discoun
- employe**
- publishe
- roysche

SQL Workshop provides various ways to migrate data from one table to another. One way is using the Save Result In Export Format query option.

This option enables you to store the results of ANY query into a text delimited file. You can extract and format the results any way you'd like.

We'll create a query to select all columns from the employee table except the two columns we removed.

Query - 1

```

SELECT employees.ssn, employees.first_name, employees.last_name,
employees.middle_init, employees.address, employees.city, employees.state,
employees.zip, employees.hire_date, employees.termination_date FROM
employees|
  
```

Table Data

SQL Workshop is the only database tool that can compare and transfer data between tables. The tables can even exist on different servers and be different database types (i.e. Oracle and Sybase).

SQL Workshop compares the data in each table, row by row. It then inserts and updates rows of data into the Destination Table based on the options you choose.

This is invaluable in managing and comparing tables in a multi-database environment.

Check this to report on any data differences between similar rows of data. All Rows 3/13/95 8:24 PM

SQL Workshop provides many powerful features when working with Sybase/SQL Server databases.

The Referencing Objects Window displays procedures, triggers, and views that reference a selected table in the Tables/Views List.

Unlike other tools that query the sysdepends table (which is not always correct), SQL Workshop scans the database looking for objects referencing the table. This ensures the results presented are accurate.

Select An Object To View All Rows 3/13/95 8:31 PM

Results - 1 - System10

Debug Break Point Line (Variables Displayed Below) -->>> 16

_time	_@price	_@title
20:33:34.570	19.9900	The Busy Executive's D

```

<12>
<13>  fetch price_cursor
<14>  into @price, @title
<15>
<16>  while (@@sqlstatus = 0)
<17>  begin
<18>    if @price > 10.00
<19>    begin
<20>      select @title, @price + (@price
<21>    end
<22>
<23>
<24>  into @price, @title

```

When you run the procedure, SQL Workshop displays the variables you selected at the break points you've set.

Timing information is also displayed that enables you to easily find performance problems in your procedures.

SQL Workshop enables you to debug even the most complex stored procedures.

- pubs2.dbo.title_proc (P)
- pubs2.dbo.titleid_proc (P)
- pubs2.dbo.titleview (V)

The Server Search Facility enables you to search database objects for a specific text value.

A list of objects containing the text entered is displayed.

You can print the list or easily retrieve the SQL script of any object displayed in the list using drag-and-drop.

In addition to extensive online help and documentation, **SQL Workshop** eliminates the need to remember complex SQL syntax **by enabling you to** view and paste SQL syntax into query windows.

You can then customize the syntax to meet your needs.

Query - 1 - System10

```
CREATE PROCEDURE [owner.]procedure_name[;number]
  [[ ( @parameter_name datatype [(length) | (precision)
    [= default] [OUTPUT]
  [, ( @parameter_name datatype [(length) | (precision)
    [= default] [OUTPUT] ]... [] ] ]
  WITH RECOMPILE
  AS sql_statements
```

Major features :

- ❑ **SQL Server Stored Procedure Debugger**
- ❑ **Compares and transfers data between tables**
- ❑ **Windows interface for the SQL Server Bulk Copy Program (BCP)**
- ❑ **Reverse engineer database objects.**

-  **Automatically creates SQL SELECT queries for you.**
-  **Import and export table data from/into Excel Spreadsheets.**
-  **Search for text in SQL Server objects throughout an entire server.**
-  **Extensive On-Line Help and SQL Syntax Reference.**
-  **And More.....**

SQL Workshop is available for **only \$ 299.00 (US)** per copy. Site licenses are available.
