Ted's Event WAVs for Windows #3

Thanks for downloading **Ted's Event WAVs for Windows #3**. There are 9 WAV in this archive, each voiced by a professional male announcer (**John Quincy**) and enhanced by original music and sound effects. Many can be associated with standard Windows events through the "Sounds" section of Control Panel (especially with Windows 95) or through a third-party sound event utility like *Wired For Sound Pro*. Or better yet if you're running Win95, check out **Greg Jones'** excellent freeware utility *Sound Event Editor.* This program makes it a snap to add sound events to the "Sounds" section of Windows 95's Control Panel. It lets you create sound hooks (Open, Close, Maximize, Minimize, Restore Up, and Restore Down) for nearly any executable 16-bit or 32-bit program file on your system. (If you can't find it online, e-mail GregJones@kandy.com.)

All WAVs are original creations, having been voiced by the author's friend John in a recording studio. Each is sampled in 16-bit mono at 22k using the excellent commercial WAV editor *Sound Forge 3.0.* Levels were normalized to give consistent playback volume, and each sound was professionally edited—plus special EQ effects were added to some of the sounds.

These sounds are freely distributed for personal, non-commercial use. Companies or software authors who wish to license these sounds for commercial use should contact the author for more information.

I hope you enjoy **Ted's Event WAVs for Windows**!
