Install Instructions for Win Multiple Configurations

Win Multiple Configurations (WMC) requires Windows 3.1 and VBRUN300.DLL. VBRUN300.DLL must be accessible via the path, normally it is found in the \WINDOWS\SYSTEM directory.

To install Win Multiple Configurations, run SETUP.EXE.
 If you are using a windows shell program other than Program Manager or Norton Desktop, you will have to manually create groups and group items for WMC. We recommend creating a group WMC. In group WMC, create seven items:

1. Description = Save Desktop
 Command Line = *path*\WMCSAVE.EXE
 Working Directory = *path*
2. Description = Restore Desktop
 Command Line = *path*\WMCSTRT.EXE /d/n
 Working Directory = *path*
3. Description = Quick Restore
 Command Line = *path*\WMCQSTR.EXE /?/? -- See WMC.WRI
 Working Directory = *path*
4. Description = Quick Save
 Command Line = *path*\WMCQSAV.EXE
 Working Directory = *path*
5. Description = Copy Groups
 Command Line = *path*\WMCCOPY.EXE
 Working Directory = *path*
6. Description = Refresh Desktop
 Command Line = *path*\WMCSTRT.EXE /R
 Working Directory = *path*
7. Description = WMC Help
 Command Line = *path*\JREWMC.HLP
 Working Directory = *path*

In the startup/autostart group, we recommend placing the following item:

1. Description = Restore Desktop
 Command Line = *path*\WMCSTRT.EXE
 Working Directory = *path*

NOTE: *path* represents the disk and directory where WMC was installed.

NOTE 2: Existing WMC users MUST run SETUP.EXE to properly convert their pre-Version 2 configuration files to the new configuration file format!

KNOWN PROBLEMS:
"Divide by Zero" error occurs when using Landmark's DATASAFE program with Win Multiple Configurations. This is a problem with the DATASAFE program trapping and reporting a non-fatal error and terminating Win Multiple Configurations.

GP fault occurs when run on a 286 machine. Problem is due to a bug in VBRUN300.DLL. You must use VBRUN300.DLL dated 5/12/93 or later to fix this problem.

An "Invalid File Format" error may occur when starting WMC programs. Certain older versions of the following file(s) are incompatible with Visual Basic Version 3.0:
 CMDIALOG.VBX 4-28-93

These file(s) are supposed to reside in the windows system directory. Other products may have installed these file(s) in the windows directory or elsewhere. Scan all directories for these file(s) and eliminate any occurrence of these file(s) outside of the \WINDOWS\SYSTEM directory. Make sure the file(s) in the \WINDOWS\SYSTEM directory are the ones shipped with Win Multiple Configurations or NEWER. Visual Basic file formats were changed between Version 1.0, Version 2.0 and Version 3.0. This is NOT a problem with WMC, but is an incompatibility between Visual Basic 1.0, Visual Basic 2.0 and Visual Basic 3.0 VBX files.
