A. ForceExperiment was written by Jason Marshall. It was developed in support of the Integrated First-Year Curriculum in Science, Engineering, and Mathematics at Rose-Hulman Institute of Technology. This curriculum project is supported by the National Science Foundation, the General Electric Foundation, and Lilly Endowment, Inc. If you are interested in this or any other application written for the Rose-Hulman Institute of Technology Integrated First Year Curriculum, please contact us at ifycsem@nextwork.rose-hulman.edu. The following people are currently serving as professors for the curriculum and would welcome your comments and questions:

> Dr. Claude Anderson, III, Computer Science Campus Box 98

ext. 8331

Dr. Jerry Fine, Mechanical Engineering Campus Box 140 ext. 8353

Dr. Jeffrey Froyd, Electrical Engineering Campus Box 111 ext. 8340

Dr. Mike Moloney, Physics

Campus Box 161 ext. 8302

Dr. Howard McLean, Chemistry Campus Box 70 ext. 8378

Dr. Edward Mottel, Chemistry Campus Box 71 ext. 8315 Dr. Brian Winkel, Mathematics Campus Box 132 ext. 8412

c/o Rose-Hulman Institute of Technology 6060 Wabash Avenue Terre Haute, Indiana, USA 47803

> phone 812-877-1511 or 812-877- ext.

- B. *ForceExperiment* best fits in the physics category.
- C. *ForceExperiment* simulates a force ring and torque rod. The ring or rod can have from two to four forces acting on them that the user must try to balance in one of two ways. First, the user can use numerical data supplied to calculate the balancing force, and then he can enter this balancing force into a text field. The second way the user can balance the forces is to use graphical vector addition by clicking on the forces and dragging copies of them to determine the size of the balancing force. Then the user can click the balancing force on to the rod or ring by clicking with the mouse where the head of the

vector should be.

- D. *ForceExperiment* is used as part of the Integrated First Year Curriculum in physics classes to demonstrate principles of forces and moments.
- E. ForceExperiment was developed under NeXTSTEP 2.1.
- F. ForceExperiment requires no special installation.
- G. The Documentation folder included with the application is required for online documentation built into the application. If it is removed, the application will still function

properly, except for Help.
