## Neural Network Simulation Classes for the NeXT Computer By: Ralph Zazula

University of Arizona zazula@pri.com (NeXT Mail)

July, 29 1992

This package contains Classes that can be used to create software simulations of neural network architectures. These were written to facilitate rapid creation of code to explore various network topologies and learning algorithms. The Neuron class implements a number of different types of "activation" functions including: Sigmoidal, Sgn, Tanh and Binary and also allows the use a pseudotemperature to create a stochastic network for use in things such as simulated-annealing. The Neuron class uses a linked-list structure to store and retrieve weights and connections amongst the Neurons resulting in very fast performance.

Also included in the distribution is the Neuron-HT class. This variation of the Neuron class uses a HashTable structure to store the connections and weights. The HashTable data-structure provides constant-time retrieval of the weights and connections but also introduces some overhead. Experimental results showed that the HashTable exhibited faster performance for very large networks (>256 fully-connected Neurons).

The classes contained are:

Neuron Implements a number of different types of neurons

Neuron-HT Same as above with HashTable data-structure

BackPropEngine Implements a back-propagation network

The Example files are:

An example of using the BackPropEngine (BPE) to perform the identity function

boltz An example of using stochastic Neurons to implement a

Boltzman machine. This example implements the XOR function

An example of a Hopfield associative-memory network

Other documentation can be found in the Class descriptions, code or example programs. If you have any questions/comments, feel free to write or e-mail me.

**weighted\_matching** An neural-network solution to the weighted-matching problem

An excellent reference on Neural-Networks is: *Introduction to the Theory of Neural Computation* by Hertz, Krogh and Palmer, 1991 - Addison Wesley, Publisher (ISBN 0-201-50395-6)
