Utilities

Description:

Secure provides *private single* key encryption to user files. It can be used either as a standalone or Services menu application.

Installation...

To use Secure as a Services application, install in ~/Apps (or somewhere in your

Update Viewers". Consequently, applications which can provide Filenames to the pasteboard will dynamically have a "*Services -> Secure*" menu available. Some of the applications which can provide pasteboard Filenames include Workspace,

ApplicationPaths) and either Logout/Login or select Workspace menu "View ->

Librarian, and Edit.
