UHMath Object

UHMath allows the user to communicate with *Mathematica* in Mathlink mode.   It makes *Mathematica*'s computational power available to the user   from Objective C programs.   The accompanying UHMathPalette makes the communication process even simpler by allowing the user to connect to *Mathematica* in Interface Builder. The user can send any valid *Mathematica* expression   to UHMath and obtain the result as a string or display the result as a plot,   depending on the method called and the input given.

Dr. John R. Glover
Electrical Engineering Department
University of Houston
Houston, TX   77204-4793

Phone: (713)743-4430
