

Sybase databases for NeXT computers

Sybase, Inc. has developed three database products for NeXT platforms: the SYBASE® SQL Unlimited Server, SQL Limited Server, and DB-Library®.

SQL Unlimited Server for production

The SYBASE SQL Unlimited Server, a relational database management system that supports an unlimited number of users, is intended for production use. The SQL Unlimited Server is available from Sybase at prices consistent with their prices for 386, 486, and low-end Sun platforms, and there are discounts for higher education customers. For more information, contact Sybase at 510-596-3500.

SQL Limited Server available only for NeXT

The SYBASE SQL Limited Server provides all the capabilities the Unlimited Server but supports only five simultaneous users. This product is only available for NeXT computers and is intended for application development.

DB-Library works with both servers

The SYBASE DB-Library contains Sybase's open client library utilities. Both the SQL Unlimited Server and the SQL Limited Server must have the DB-Library installed.

The SYBASE DB-Library, included in Release 2 Extended (/NextLibrary/Packages/ThirdParty/Sybase_DB-Library.pkg) contains on-line reference documentation.

customers get great pricing

The combination of NeXT hardware and the Limited Server costs substantially less than other entry-level Sybase development systems. In fact, the prices of NeXT/SQL Limited Server systems are lower than any database-development product for UNIX workstations.

The SQL Limited Server for NeXT customers who already have or are purchasing Software Release 2 comprises

- An on-line installation guide
- The five-user SQL server
- The SYBASE Administrator utilities
- The on-line reference documentation

- A diagnostic server that helps Sybase Technical Support when customers request assistance

upgrade customers get a version of the server for free

NeXT customers upgrading from Software Release 1 to 2 can get the SQL Limited Server from NeXT at no cost. Customers who fill in the Upgrade Supplement Coupon that comes with their Release 2 upgrade and return it to NeXT by December 31, 1991 will receive the Software Upgrade Supplement. The Upgrade Supplement contains the same software as the SQL Limited Server for new NeXT customers except that it lacks the diagnostic server.

Developers, including international developers, who will resell an application based on the SQL Limited Server can purchase the product from Sybase. The customer will also receive one listing in the Sybase Software Solutions Directory. For more information, contact Peter Scanlan at 510-596-3360 (fax 510-596-9441).

Higher education developers or corporate customers developing internal applications can purchase the SQL Limited Server from NeXT for a special price of \$300 through March 1992. Higher education discounts are applicable for this purchase. Refer to part number N5521 when making inquiries.

Sybase provides support

The SYBASE SQL Limited Server and the SQL Unlimited Server are supported only by Sybase for a fee. For more information on Sybase support, call 1-800-8SY-BASE.
