WPS2Rexx/2

WPS2Rexx is a program designed to ease the backup of the WorkPlace Shell component of Os/2 2.x.

It allows you to save the contents of your WorkPlace to a Rexx script. The Rexx script can be used to regenerate your WorkPlace objects in case of disaster. It can also be used on a corporate basis to standardize WorkPlace's. It will also enable you to save the icons to separate .ICO files.

Unlike many other similar products on the market WPS2Rexx/2 uses only official WorkPlace API to obtain the information it needs. Therefore the program should continue to run in the future whether or not IBM decides to change the layout of the Os/2 .INI files.

The program was developed and is being maintained by Kim Kruse Hansen Denmark. If you have suggestions and or questions please feel free to contact me. I can be reached at the following address

<div align="center">

Kim Kruse Hansen
Vestergade 133 B 1,4
8600 Silkeborg

</div>

If you are a member of the international Fido network you can get in touch with me using NetMail. My Fido network adress is :

<div align="center">

2:234/100.13.

</div>

New version of this program will be available for download at my FidoNet Boss Node :

The Jam BBS , 2:234/100 , 45-31420291.

Installation

WPS2Rexx/2 is supplied in a ZIP called WPS2Rexx. It should contain the following files :

WPS2Rexx.Inf   -   The documentation
WPS2Rexx.W51   -   Documentation in WordPerfect 5.1 format
WPS2Rexx.Dll   -   The actual WorkPlace object
WPS2Inst.Cmd   -   Installation Script

To install WPS2Rexx/2 just type WPS2Inst from any Os/2 prompt. A couple of moments later you should see a new Object entitled "WPSRexx/2" on your desktop.

Please refer to the ~~how to~~[1] section on how to proceed from here

---

[1] how to

How to

If you used the supplied installation program WPS2Inst.Cmd , you should have a new object on your desktop entitled "WPS2Rexx/2". If you dont have this object on your desktop please refer to the ~~installation~~[2] section.

The WPS2Rexx object is subclassed from the standard folder object. The only visual difference is a new menuitem on its popup menu "Rexx Script".

Click on "Rexx Script" and follow the onscreen information. You should now be looking at a dialogue looking something like this :

Mode specifies what to do if the objects exist on the desktop.

Fail	Object creation fails
Replace	Deletes old object and creates a new one
Update	Update settings of old object

Generate specifies the structure of the Rexx script

Tree	Rexx files chain in other Rexx files to create subfolders
Flat	Each folder just generates itself and nothing else

Other options

Save icons	Allows you to save every ICON on your desktop into a .ICO file.
SingleStep	Walk the desktop tree and be prompted for every folder traversed.

Workdir

Specifies where all your Rexx files and Icons will be placed.

---

[2]installation

The master Rexx script is called WPS.CMD. Here is an example of what it may look like.

```
/*
        This file was generated by WPS2Rexx/2 V 1.0
        (c) 1993 Kim K. Hansen
*/

        Call RxFuncAdd 'SysLoadFuncs', 'RexxUtil', 'SysLoadFuncs'
        call SysLoadFuncs

        ObjMode = "Replace"

        Call Fldr0.Cmd ObjMode                /* Folder : Desktop */

/* End Of Script */
```

Each folder has its own script file, which are called Fldr#.Cmd.

```
/*
        This file was generated by WPS2Rexx/2 V 1.0
        (c) 1993 Kim K. Hansen
*/

/*      Dump of Folder : Desktop       */

Parse arg ObjMode
If ObjMode = "" then
 ObjMode = "fail"

Future plans

I have no definite plans for further development of WPS2Rexx/2 at the moment.

Other info

The documentation to WPS2Rexx/2 was written entirely in WordPerfect 5.1 and converted to INF format by another of the authors programs WP2IPF/2. This program is also freeware and is available around the world on various networks and BBS's. Look for a file called WP2IPF2.ZIP. I have supplied the documentation in WP 5.1 format , so that you can see how to structure a WP document , that can be converted to an Os/2 2.x INF file.
