

Upgrading to v2.5

v2.5 is a major upgrade. To upgrade from a previous version, go into your \POWRBBS directory. In that directory run the new POWRMAIN.EXE found on the v2.5 distribution disk. Extract all the new .EXE files. That's all there is to it. You will probably want to print on the new manual. Note that some of the new files (such as sample RIP screens), are not installed when upgrading.
